

**Efficient**

- > Maximum efficiency of 98,1 %
- > Highest yields through OptiTrac and OptiCool

**Safe**

- > Compatible with the BDEW guidelines
- > Integrated ESS DC load-disconnecting unit
- > Electronic String Fuse and String Failure Detection
- > String Current Monitoring

**Flexible**

- > DC Surge Protection Device (type II) can be integrated
- > DC input voltage of up to 1000 V
- > Flexible system design using two separate step-up converters

**Simple**

- > Three-phase feed-in
- > Cable connection without tools
- > Innovative DC plug system
- > Convenient wiring compartment
- > Bluetooth® Communication

# SUNNY TRIPOWER

With three phases for simple system planning

In a class of its own: packed with state-of-the-art technology, the Sunny Tripower makes for easy installation, high yield, and secure grid support. Thanks to its multi-string technology and the widest input voltage range, the three-phase inverter is suitable for every imaginable module configuration. In addition, it is highly flexible in terms of the plant design – from 10 kW up to the megawatt range. The Sunny Tripower presently fulfills the BDEW guideline requirements (medium voltage guideline), and in so doing, it participates in reliable grid management. A comprehensive security concept encompassing, among other things, string failure detection, electronic string fuses, and a surge protection function, providing the highest level of availability and reducing plant costs.
